

BONO 5 · GUITARRA SIN MISTERIO

192 Acordes Ilustrados

Diccionario visual completo: las 12 notas × 16 tipos de acorde

Cómo leer estos diagramas

Cada diagrama es el mástil visto de frente, con la guitarra en vertical. Este diccionario reúne **192 acordes**: las 12 notas, cada una con los mismos **16 tipos de acorde**, siempre en el mismo orden para que encuentres cualquiera de un vistazo.

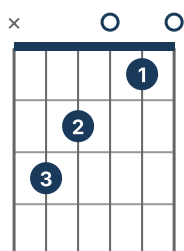

- **Líneas verticales:** las 6 cuerdas. La de la izquierda es la 6ª (Mi grave) y la de la derecha, la 1ª (Mi agudo).
- **Líneas horizontales:** los trastes. La barra gruesa de arriba es la cejuela: el diagrama empieza en el traste 1.
- **Número a la izquierda:** si no hay barra gruesa, ese número indica el traste donde empieza el diagrama (en el ejemplo, el C#m7 empieza en el traste 4).
- **Debajo de cada diagrama:** el nombre del acorde y sus notas, empezando por la fundamental. Si una nota tiene un nombre poco habitual (E#, Bbb...), entre paréntesis va la nota de la tecla que suena (por ejemplo, E# = F).
- **Círculo con número:** dónde pisar y con qué dedo: 1 = índice, 2 = medio, 3 = anular, 4 = meñique.
- **Barra horizontal con número:** cejilla. Ese dedo pisa a la vez todas las cuerdas que cubre la barra.
- **O encima de una cuerda:** esa cuerda suena al aire. x: esa cuerda no se toca.

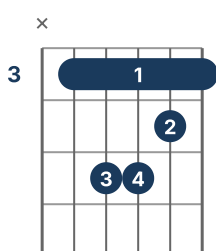

Mismo sonido, dos nombres. C# y Db son la misma nota (igual que D#/Eb, F#/Gb, G#/Ab y A#/Bb). Cada nota aparece una sola vez, con el nombre más usado en guitarra; el título de la página te recuerda el otro.

Abiertos y con cejilla. Cuando un acorde tiene una forma abierta cómoda, se muestra esa. Si no la tiene, se muestra la forma móvil más baja del mástil: casi siempre con cejilla y la fundamental en la 6ª cuerda (forma de E) o en la 5ª (forma de A); los disminuidos, los semidisminuidos y algunos aumentados, add9 y sextas se tocan con formas cerradas sin cejilla. Esas formas se pueden mover: si corres la misma forma un traste, obtienes el acorde de la nota siguiente.

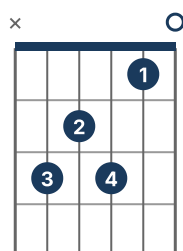

Acordes de Do (C)

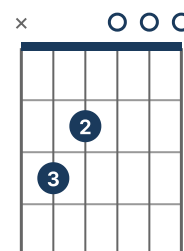

C
Do mayor
C · E · G

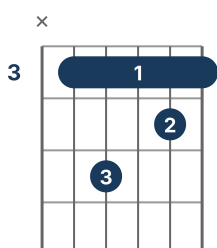

Cm
Do menor
C · Eb · G

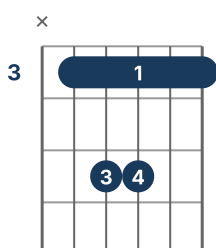

C7
Do séptima (dominante)
C · E · G · Bb

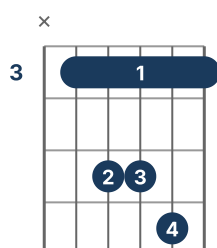

Cmaj7
Do séptima mayor

Baug
Si aumentado
B · D# · F## (=G)

Fórmulas de los 16 tipos de acorde

Cada tipo de acorde es una receta de distancias desde la nota fundamental. Los semitonos se cuentan siempre desde la fundamental (1 semitono = 1 traste). La 9ª es la 2ª una octava más arriba (14 semitonos = 2 + 12).

Tipo	Ej.	Fórmula	Semitonos	Notas en Do
Mayor	C	1 - 3 - 5	0 · 4 · 7	C - E - G
Menor	Cm	1 - b3 - 5	0 · 3 · 7	C - Eb - G
Séptima (dominante)	C7	1 - 3 - 5 - b7	0 · 4 · 7 · 10	C - E - G - Bb
Séptima mayor	Cmaj7	1 - 3 - 5 - 7	0 · 4 · 7 · 11	C - E - G - B
Menor séptima	Cm7	1 - b3 - 5 - b7	0 · 3 · 7 · 10	C - Eb - G - Bb
Suspendido 2	Csus2	1 - 2 - 5	0 · 2 · 7	C - D - G
Suspendido 4	Csus4	1 - 4 - 5	0 · 5 · 7	C - F - G
Séptima suspendido 4	C7sus4	1 - 4 - 5 - b7	0 · 5 · 7 · 10	C - F - G - Bb
Sexta	C6	1 - 3 - 5 - 6	0 · 4 · 7 · 9	C - E - G - A
Menor sexta	Cm6	1 - b3 - 5 - 6	0 · 3 · 7 · 9	C - Eb - G - A
Novena	C9	1 - 3 - 5 - b7 - 9	0 · 4 · 7 · 10 · 14	C - E - G - Bb - D
Novena añadida	Cadd9	1 - 3 - 5 - 9	0 · 4 · 7 · 14	C - E - G - D
Disminuido	Cdim	1 - b3 - b5	0 · 3 · 6	C - Eb - Gb
Disminuido séptima	Cdim7	1 - b3 - b5 - bb7	0 · 3 · 6 · 9	C - Eb - Gb - Bbb (suena como A)
Semidisminuido	Cm7b5	1 - b3 - b5 - b7	0 · 3 · 6 · 10	C - Eb - Gb - Bb
Aumentado	Caug	1 - 3 - #5	0 · 4 · 8	C - E - G#

Notas que se pueden omitir

En algunas formas de guitarra no suenan todas las notas de la fórmula: la 5ª es la que más se omite (por ejemplo, en el C7 abierto). La fundamental, la 3ª y la 7ª son las que definen el carácter del acorde.
